1 Introduction

1.1 Overview of LHC

1.2 Motivations for Analyses

2 Theoretical Background

2.1 Standard Model (Mention W+Jets)

2.2 BSM motivations (Mention LFV Higgs)

3 Experimental Design

3.1 LHC

3.2 CMS

3.2.1 Overview

3.2.2 Tracker

3.2.3 ECAL

3.2.4 HCAL

3.2.5 Muon System

3.2.6 Trigger

4 Event Simulation

4.1 Monte Carlo Generation

4.2 Detector Simulation

5 Event Reconstruction

5.1 Particle Flow

5.2 Electrons

5.3 Muons

5.4 Hadrons

5.5 Jets

5.6 MET

6 Analysis Strategy (Summarize LFV, W+Jets ANs)

6.1 Background Estimation⁴

6.1.1 Monte Carlo Samples

6.1.2 Tau Embedding

6.1.3 Fake Rate Method

6.1.4 QCD Estimation
